

# Quite Imposing & Quite Imposing Plus

Imagine being able to easily impose PDFs without leaving Acrobat.

From easy booklet making to complex imposition layouts, work from a central control for ease of use and impose PDFs from any source

Easy to work with bleeds, trim, and shift, step and repeat, add page numbers and masking tape. This is all about combining pages onto larger sheets to make books, booklets or special arrangements.

## Automate your Set Ups.

A new **Sequences** dialog allows the user to string together imposition commands and give the result a name. The user can also suppress prompts and provide a custom message, for speed so that less trained users can use a system that has been already set up.

**Saves time and money!**

## Command History In XML

A history of ALL commands is stored and can be used to make a particular PDF. They are an embedded XML file. The commands can be inspected in the Quite Imposing Plus Info Panel, which can now show either layout or commands. As well as providing an audit trail, these form the basis of our standalone product Quite HOT Imposing which will be able to use the PDF file or extracted XML files to control another imposition. We call this 'Imposition by Example'.

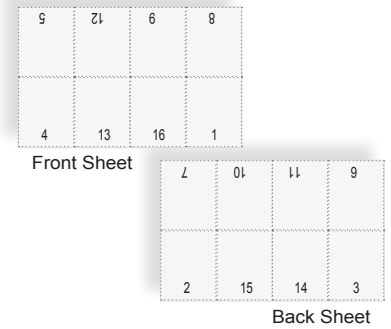

**Available for Macintosh & Windows**

or for more information see our web site <http://www.quite.com>.

## More features of Quite Imposing & Quite Imposing Plus

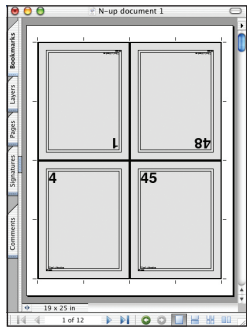

### Shuffle Assistant

This is a new option on the **Shuffle Pages** for imposition function. It allows the user to type in a page count, rows and columns, then fill in only the page numbers on the front of the first sheet. It can then work the correct rule for the most common saddle stitched, perfect bound and cut stacks imposition (signature). Shuffle pages also now supports advanced rules for cut stacks impositions.

### QI button

There is now a QI button to give fast access to the Quite Imposing Control Panel without going through the menus. (Note: in Acrobat 6 and later, you may need to use **View > Toolbars > Advanced editing** to see the button.)

### N-up & N-up Centering

Arrange consecutive pages on a larger sheet e.g. 2x2. The **N-up** and **Step and Repeat** functions now allow the resulting page to be centered. This is a huge time saver.

### Step & Repeat

Fills sheets with multiple copies of the same page (e.g. for business cards, labels)

### Define Bleeds

Impose pages with artwork that overruns the printing edge designed to be trimmed later.

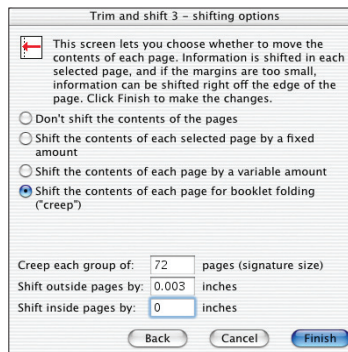

### Impose Annotations / Form Fields

This is an option now in preferences to decide whether form fields and annotations are discarded (as in 1.0) or converted to part of the imposition.

### PDF/X Support

(Quite Imposing Plus only)

Optionally (Off by default in Preferences) Quite Imposing Plus will work to preserve PDF/X data in all imposition functions. Both PDF/X-1a and PDF/X-3 are supported. Quite Imposing Plus is not a preflight tool or converter, but will check the PDF/X status of the files it works with. For instance, it will make sure that a booklet imposed from PDF/X-3 file is a PDF/X-3 file.

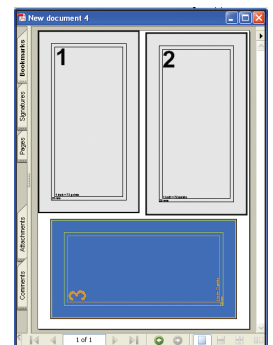

### Trim & Shift

Deal with "creep" in a folded booklet or add space, shift contents or trim from the edges

### Manual Imposition

Manually place pages over any other page at any scale.

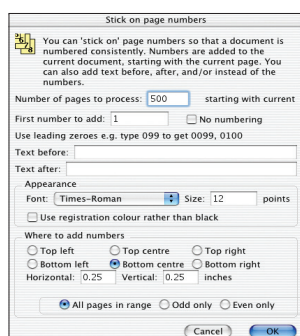

**Insert Blank Pages** or reverse the order of pages

### Registration Marks

Remove or add crop marks etc. Choose from some standard templates or create your own.

### Stick on & Peel off Masking Tape

Define a layout for "tape", stick on or peel off one or more pages.

### Stick on & Peel off Page Numbers

Add or remove numbers to pages or imposed sheets. Can also add arbitrary text.

### Bates Stamping

(Quite Imposing Plus only)

The **Stick On Page Numbers** function allows a user to enter numbers with a leading zero. The resulting numbers will have at least the same number of digits. For instance, if a user typed 0098, the pages will be numbered 0098, 0099, 0100, etc.
